

Installer et configurer des certificats Entreprise

Troubleshooting tips

Trouver les provisioning profiles

Sur le Mac servant au développement les provisioning profiles téléchargés ou installés, se trouvent dans :

```
~/Library/MobileDevice/Provisioning\ Profiles/
```

attention il y a un espace dans le chemin

on supprime tous les fichiers avec la commande :

```
rm ~/Library/MobileDevice/Provisioning\ Profiles/*.mobileprovision
```

“ Fichier cache Xamarin des provisioning profiles

On the Mac, look in `/Users/<username>/Library/Xamarin/Provisioning Profiles.plist`

The Library directory is hidden by default on the Mac. To show it:

1. Select your home folder on the left in Finder
2. Open Finder menu View->Show View Options.
3. Check the checkbox to "Show Library Folder." You will now see the Library folder in your home folder.

You can open the `Provisioning Profiles.plist` file in any text editor. There will be a `<dict>` entry for each provisioning profile and the GUID will be in a `<Uuid>` key. Once you find the GUID/Uuid, you can see the certificates that are associated with that profile in an `<array>` of `<dict>`s under the key `<key>DeveloperCertificates</key>`
